OPTION 1

Contour Light Body Sculpting

-FREQUENTLY ASKED QUESTIONS-

1. What can I expect during a Contour Light session?

On your first session you will see measurable results. Once the pads are in place, you simply enjoy a relaxing 25 minute session. Immediately following your treatment, the vibration plate will be used for 10 minutes to help with lymphatic drainage of the fat.

2. What area of the body can be treated?

The Contour Light treatment can be effectively used on essentially every part of the body where localized fat deposits exist that are resistant to diet and exercise. This includes the waist, hips, upper legs, thighs and upper arms.

3. What risks are involved?

There are no risks involved in using Contour Light. It is considered a safe alternative to invasive procedures such as traditional liposuction. The Contour Light treatment is 100% non-invasive and does not cause any bruising or scarring.

4. Are there any side effects?

No. There are absolutely NO side effects beyond fat loss.

Contour Light Body Sculpting

I never thought I would lose my love handles, but Contour Light changed that for me. Try it, you will be glad you did!

~ Laura Wallace

At my age, I never thought that I could tone the stubborn fat under my chin, THANK YOU!

~ Dana Star

After having a baby it was really hard for me to lose the cellulite on my thighs, after just a few treatments I started to see amazing results. Now I can wear a bathing suit again and I feel more confident!

Contour Light Body Sculpting

Safe & Proven Technology!

Light therapy is not new. It has been used for many ailments ranging from chronic pain to Healing

wounds to hair growth. What is new is light being used to target fat cells. After adipose (fat) cells are exposed to this specific wavelength, 99% of the fat is released from the cells. The result is inch loss and impressive spot reduction anywhere on the body including the arms, back, bra bulge, saddlebags, thighs, abdomen, and breasts.

So what happens to the fat? Once the fat leaves the cells, it is transported as free fatty acids to the lymphatic system and eliminated from the body.

NON-INVASIVE FAT REDUCTION

Using the power of the latest LED Light Therapy, Contour Light is the natural and healthy way to inch loss on the waist, hips, thighs, upper legs, arms, even the chin.

MEASURABLE RESULTS IN JUST ONE TREATMENT

Have you done everything to lose those unsightly fat bulges including regular exercise, a healthy diet and weight loss plans, and nothing has worked? If so, then you are in the right place. Contour Light will help you lose inches in the areas on your body that are resistant to diet and exercise. Patients typically experience a reduction from 2 to 5 inches, with some patients seeing an even greater change. The larger the patient, the more measurable the results will be.

NO PAIN-NO SURGERY-NO DOWNTIME

The best part about the Contour Light Treatment is that there are No side effects! There is No Downtime, No Bruising, No Swelling, No Pain or anesthesia required. Each treatment takes about 25 minutes and you can be back to work.

NON-INVASIVE SLIMMING TECHNOLOGY

Red Light therapy is not a form of radiation or UV. Our Low Level Laser (light) Therapy (LLLT) is based on infrared light and near infrared light for non-surgical, non-invasive fat loss, skin rejuvenation, wound healing and chronic pain. It is the safest and least invasive way to sculpt the body.

OPTION 5

Frequently Asked Questions

What does a Contour Light treatment feel like?

Patients lie on a treatment bed and the Contour Light pads, which resemble large heating pads, are placed over the area to be treated. You will feel a slight warming sensation, but no pain or discomfort. Most patients can read or use their phone/portable device, while some will even take a short nap.

What type of results can be expected?

The recommended Contour Light treatment protocol involves 10 treatments in a series, delivered every other day or every 3 days. Patients see a noticeable improvement within the first 2 or 3 treatments, many as early as the 1st treatment. The full series of 10 treatments should address most patient expectations, but some patients may want to continue with additional treatments.

How long will the results last?

Results will vary from patient to patient, primarily due to the commitment by the patient to their goals. If a patient maintains a healthy lifestyle of a diet and exercise program that promotes weight control, their results can be long term.

Can anyone be treated?

A Contour Light treatment is safe and effective for anyone who is in generally good health. There are some restrictions, but your clinician can answer any questions you may have. Patients are recommended to consult their physician before starting any type of diet or exercise program.

What do our patients say?

"I used the Contour Light 3 times a week for a month. After the first week, I noticed my clothing was getting loose. After my final visit, I was down 18 inches. I needed new clothing because all my clothes were sagging. I would recommend it to anyone desiring a change in their shape and willing to follow the protocols. It's been well worth it!"
- Chris M.

"I received 12 treatments with the Contour Light over the course of about 6 weeks. Not only did I lose inches to the point where my clothes were loose, the best thing was how it improved my cellulite. I can wear a bathing suit again without feeling self-conscious about my legs!"
- Melanie D.

"The Contour Light system is amazing. Within the first two treatments, I could notice that my skin was becoming more firm and smooth. The light helped me lose inches and also tightened my skin, making me look much younger!"
- Catherine G.

Non-Invasive Body Contouring Technology

Measurable results from the first treatment
No Pain, No Surgery, No Discomfort
Improve all areas of the body

OUTSIDE

No Pain, No Surgery, No Discomfort! Improve all areas of the body

Safe and Clinically Proven

Photobiosimulation

Clinical studies show that when a fat cell is exposed to mid-600nm red light, the cell will release 99% of its

contents within just a few minutes, leaving the cell deflated much like when a balloon releases its air. The light stimulates the mitochondria of the fat cell in a process called photobiosimulation, causing the cell wall to open and allow the cell contents to escape. Additional clinical studies show that patients experienced significant inch loss caused by exposure to this light alone.

How does this cause inch loss?

After exposure to the light, the fat is released from the cell into the interstitial space (just below the deepest layers of your skin) and is evacuated from this area by the lymphatic system. By eating right, getting some exercise and drinking plenty of water, the lymphatic system will be much more efficient in the removal of this fat. The liver and kidneys play an important role in eliminating the waste from your body, so living healthy is vital for enhanced results and overall wellbeing.

Non-Invasive Body Contouring

LED-based light therapy has been effectively used for decades to improve appearance. Contour Light is the most innovative design available, delivering more light energy than any other system in this category.

Measurable results from the first treatment

Patients typically experience a reduction from 2 to 5 inches, with some patients seeing an even greater change. The larger the patient, the more measurable the results will be.

No Pain, No Surgery, No Discomfort

The treatment is totally non-invasive; no surgery or downtime. Contour Light's red and infrared LEDs deliver energy at a very high volume, but there is no heat involved due to the system's proprietary "heat-sink" technology, which draws the heat away from the patient's skin. There is no pain or discomfort.

Improve all areas of the body

The Contour Light pads are large, soft and flexible and can be safely used on virtually every part of the body: neck, back, arms, chest, abdomen, buttocks and thighs.

CONTOUR LIGHT®
MANUFACTURED BY
CONTOUR RESEARCH

Introducing the revolutionary design of the Contour Light System. This patent-pending technology provides the most effective treatment of any device in this category. Delivering the highest amount of light energy for optimal efficacy. The 635nm technology behind the Contour Light system has been proven to deliver measurable results in multiple clinical studies, without surgery or pain, and is totally safe for both the patient and technician.

INSIDE

Body Contouring Technology that is safe and effective

A Columbian surgeon first discovered that exposing his patients to mid-600nm light prior to a liposuction procedure made their fat much easier to extract, without heat or discomfort. Initial testing indicated the light caused a photo-biostimulation of the fat cell mitochondria, starting a chain reaction that opens transient pores in the cell wall and releases the triglycerides (fatty acids, glycerol and water) into the interstitial region of the body.

These clinical studies proved that 99% of the cell contents were released within 6 minutes of exposure to 635nm light energy and patients experienced

an average 3 to 5 inch circumferential reduction of the treated areas* with the application of the light alone and no other protocols involved. After years of research, it has been determined that additional steps can dramatically improve results: patients who maintain a healthy diet, perform some minimal exercise and drink a sufficient amount of water will enhance their outcomes.

Contour Light's large light pads are coated with a reflective material that concentrates and delivers multiple times more light energy to the treatment area per session than all other systems on the market.

OPTION 7

Lighting the way
...to wellness

Contour Light is a non-invasive body contouring device that helps you achieve a natural-looking, slimmer appearance without surgery.

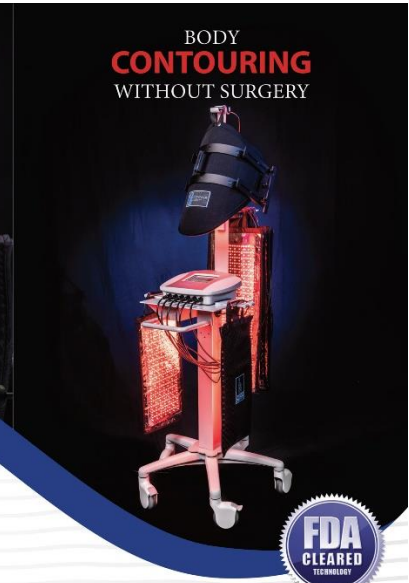

The Contour Light incorporates 6 LED pads with a proprietary reflective surface which traps and redirects the light energy back into the tissue for maximum results

The Contour Light is FDA cleared for circumferential reduction/inch loss and the temporary relief of minor muscle and joint pain, arthritis, muscle spasms, relieving stiffness, promoting the relaxation of muscle tissue and to temporarily increase local blood circulation.

Proven to be effective in a clinical study that was approved by an IRB involving 118 patients who experienced an average circumference reduction of 2.49" per single session.

The latest advancement in LED technology
backed by an IRB-approved clinical study

What is **RED LIGHT THERAPY?**

Delivering the highest amount of energy for optimal efficacy, the Contour Light system incorporates a proprietary reflective coating that assists in the retention of light within the tissue. Providing measurable results without surgery or pain, the Contour Light can help in attaining results for all types of individuals seeking to achieve a more sleek and slim profile.

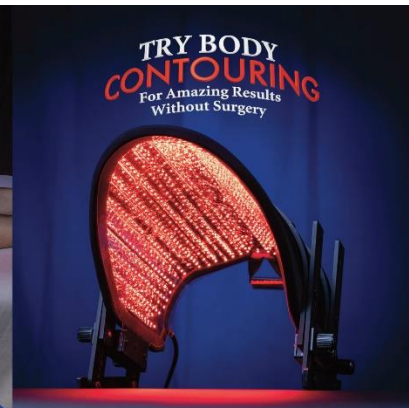

The Contour Light System is based on a technology that was initially researched by NASA to maintain the health of astronauts while in space and was discovered to be effective for circumferential reduction (inch loss) by a Columbian surgeon. The surgeon found that by exposing his patients to mid-600nm light prior to a liposuction procedure, the fat was much easier to extract without heat or discomfort. Subsequent testing indicated the light energy caused a photobiostimulation of the fat cell mitochondria, starting a chain reaction that opens transient pores in the cell membrane and releasing the cell contents into the interstitial region of

the body. Under a microscope, it was observed that the cells appeared to deflate and transform from a "grape to a raisin". This action results in a reduction of the circumference of the treated area of a patient's body.

Results can be achieved with exposure to the light alone, and when a Contour Light treatment is coupled with a protocol of diet and exercise, it acts as an accelerator to a weight loss program to deliver the best possible outcomes. Patients find it is much easier to lose weight, to drop multiple dress/pants sizes and improve the appearance of their body and skin in general.

As an additional benefit, the Contour Light System is also FDA cleared for the temporary relief of arthritic, joint and muscle pain, including the temporary increase of local blood circulation. Overall, the Contour Light treatment provides a relaxing and comfortable experience for patients seeking an improvement in their health, well-being and appearance.

DISCLAIMER: This is a general website for Contour Light. It contains all the basic information about the product and service, including facts and questions. It's the same information from the brochure with added information and demonstration videos. This is the website that comes the starter package or our \$150 web package. This is the WordPress Template for the website. We can change the colors, the size, add more pages, change pictures, and add your logo and contact information. If customers want to add additional content or change pictures then they must provide that information to the web designers and make sure it's approved by Contour Light. All additional content or to change the content on the website, customers must provide everything to web designers. If customers want to change the WordPress template and the overall look of the website, customers will have to pay extra for design services and purchase a premium WordPress template starting at \$60 (price for just the template). Extra design services will cost \$35.00 an hour.
